ENVIRONMENTAL INFORMATION

AIR QUALITY

Diesel engines incorporate an optimised exhaust gas treatment, the Selective Catalytic Reduction system (SCR), with AdBlue® twin dosing to further minimize nitrogen oxide emissions.

LIGHTS

Headlamps and rear lamps are 100% LED, reducing significantly power consumption and increasing life and effectiveness of the lights.

RENEWABLE AND RECYCLED MATERIALS

Use of renewable materials (cotton, natural rubber and cellulose) and recycled materials (plastics) in various parts of the vehicle.

TYRES

Low rolling resistance tyres provide a reduction of the rolling resistance coefficient.

AERODYNAMICS

Improved and enhanced vehicle aerodynamics, thanks to optimised design throughout the bodywork, wheels and cooling system.

BRAKES

Incorporation of RBO technology (which reduces the residual brake torque between the brake and disc), permits an emissions reduction of up to 1g CO₂/100km.

BODYWORK

Use of ultra-high strength steel, which together with hot stamping technology, permits a reduction in thicknesses and weight without loss of performance.

ACOUSTICS

All versions incorporate a double-seal system on the doors, which reduces noise levels and enhances comfort.

SEATS

The use of new PUR foam formulations reduces the emission of volatile organic compounds (VOCs) in the cabin interior by up to 50%.
